! Boot has split

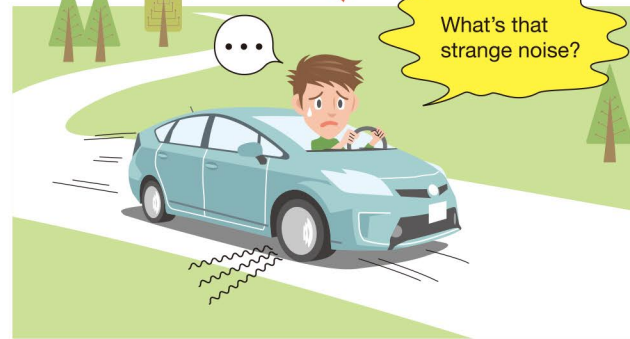

It is difficult to notice any problems with a boot until it fails. If it does fail, however, then there is a risk of further damage occurring.

If you think there may be a problem with your boots, we recommend you bring your car into a Toyota dealer for an inspection.

If a boot splits and stones or sand get inside or the grease leaks out, you could find yourself in this situation...

I should have changed the drive shaft boots sooner! Now the drive shaft will need replacing as well...
